

Professional Statement

My name is Quinton Bray, and I am currently completing the Google Cybersecurity Professional Certificate as I work toward starting a career in cybersecurity. I became interested in cybersecurity because I enjoy learning how technology works, solving problems, and developing skills that can help protect people and organizations from cyber threats.

I am a motivated and disciplined learner who is committed to personal and professional growth. Through personal projects and pursuing my own business ventures, I have developed skills in organization, communication, responsibility, and persistence. These experiences have taught me how to set goals, learn independently, and stay focused on long-term objectives.

I am currently building skills in security principles, risk management, Linux, SQL, incident response, and security auditing. As I continue my training, I am also creating a portfolio to demonstrate my knowledge and hands-on skills.

My goal is to obtain an entry-level cybersecurity position where I can gain practical experience, continue learning, and help organizations protect their systems and information.
