Parking lot USB exercise

Contents	Write **2-3 sentences** about the types of information found on this device. *There are files on there that may contain PII, such as names, addresses, and phone numbers. There are also work schedule files that list sensitive information such as names, shifts, and employee budgets. Generally it's not safe to store personal files with work related files because someone could gain both confidential and personal information from the owner.*
Attacker mindset	Write **2-3 sentences** about how this information could be used against Jorge or the hospital. *Information about specific times of employee shifts and location of their job could be exposed to threat actors. Pictures of relatives and knowing when and where they plan on vacating could be a threat against the owners relatives. Information listed could possibly be used to impersonate hospital staff into providing unauthorized access.*
Risk analysis	Write **3 or 4 sentences** describing technical, operational, or managerial controls that could mitigate these types of attacks: *Different types of malware could have been hidden on this USB including a Trojan Horse disguised as a legitimate file. The device also could have had ransomware that could have compromised the hospitals data. A threat actor would have had access to PII including hospital budgets, employee shifts, names, addresses, relative/friend info, and knowledge of personal information regarding the owner. This information could have been used to impersonate employees, friends, or relatives. The hospital could implement technical controls such as antivirus software and restrictions on unauthorized USB devices to prevent malware infections. Also make it imperative that business related information is not stored with personal information.*
